Interactive Monitoring And Response Services For Buildings And Campuses

CAMPUS SECURITY

BOBBY surveillance towers and kiosks provide an overarching level of surveillance with concierge class service for those needing immediate assistance.

CONCEIRGE SERVICE

BOBBY is also there with a helping hand. Need to know what is happening on campus tonight? Just Ask BOBBY!

BLANKET COVERAGE

Dispatch multiple BOBBY towers and kiosks around your building or campus to blanket your organization in constant vigilance.

Put more eyes and ears in place to keep your building or campus safe.

Utilize facial recognition capabilities to control access to buildings and rooms.

Use glass break, smoke, CO2, and water detection sensors to react quickly to trouble events.

Monitor your surroundings with video analytics and wireless IoT sensors.

Enlist Cozaint's BOBBY-W kiosks to monitor and surveil your company or campus surroundings with video analytics and wireless IoT sensors.

Each BOBBY-W wall-mounted kiosk is engineered to continually monitor its surroundings while being available for individuals to interact with to receive help with directions, get info on local events, and chat with a live agent when needed.

Rest assured your organization will respond better to emergencies, communicate faster with staff and visitors, as well as understand the activities in and around your business in clearer detail.

Find out why we say Cozaint BOBBY systems provide *always vigilant surveillance™*.

Door and window sensors, video analytics such as people counting (for occupancy management), and live human remote monitoring delivers the peace of mind typically reserved for the biggest of fortresses.

Contact your local Cozaint dealer to learn more on how BOBBY-W systems can serve you and your organization. www.Cozaint.com

Platform Features and Benefits

• Compared to simple meeting notice kiosks -or simple alert sirens, or one-dimensional panic poles- the Cozaint Surveillance Platform provides an integrated surveillance, monitoring, and alerting system with an optional live remote monitoring system.

• Monitoring for potential illicit activities, checking for safety issues such as smoke, CO2, or other emergencies, and also detecting abnormal environmental conditions.

• Utilizing multiple Internet-of-Things (IoT) wireless sensors such as glass break sensors, or door/window open sensors, along with start-of-the-art video analytics for facial recognition processing for building/room access, people counting, and more.

• All alerts, notifications, and responses are recorded and monthly reports are presented for additional analysis.

• Deliver on-premise security staff with real-time event information to coordinate appropriate responses.

• Augmenting any security team, BOBBY-W assist in securing large spaces such as parking lots, corporate campuses, hospitals, and other important areas.

• Great for controlling access to buildings and restricted rooms.

• Wireless connectivity provides for a local hotspot as well as inter-communications for a mesh network of multiple BOBBY units.

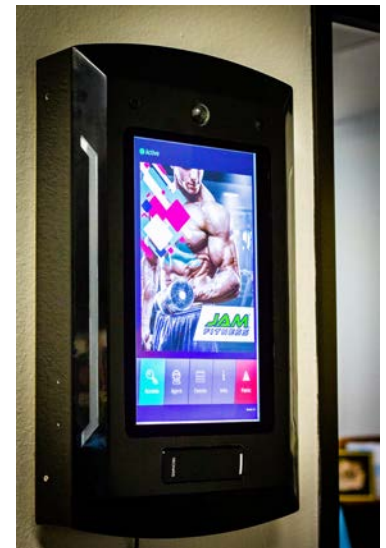

Stay in control of your environment and react faster to emergencies and abnormal activities.

System Requirements

- Self-contained unit only requires power.
- Cellular service provided if no network connectivity available at installation site.

SERVICES AVAILABLE

- Site Surveys
- Installation and Setup
- Maintenance
- Application Support
- Hardware Support
- Guaranteed Warranty

TECHNICAL SUPPORT
