

## Slash Video Storage Costs And Get Longer Retention – How It Works!

- **askALICE** is a combination hardware and software platform;

**BOBBYvms** is a powerful, full-featured, professional video management system (VMS) specifically developed for two-tier long-term video storage;

- **BOBBYvms** seamlessly integrates into the **askALICE** multi-tiered video recording storage hardware;

- All surveillance video is initially captured to scalable tier 1 hard disk for immediate playback;

- **askALICE** will continually **COPY** unaltered original video to scalable tier 2 LTO storage;

- Users (operators) require **NO** additional steps for timely and easy search and video playback;

- Users (operators) simply move about on their “timeline” with video still on harddisk tier 1 storage available for immediate playback, whereas video on LTO tier 2 storage will require a **mere 8-minute** wait while the system retrieves the necessary video; **No other actions necessary!**
